Certificate of Conformity

On the basis of the referenced report(a) and the third party inspection carried out at the Organization, the organization has been found to comply with ISO 14064 norms, on this verification at the time the assessments were carried out. By displacing/reducing fossil fuel-based electricity with electricity generated from a renewable source (Electrical Solar Panel), the project results in reductions of CO2 emissions that are real, measurable and give long-term benefits to the mitigation of climate change. An analysis of the investment demonstrates that the proposed project activity is not a likely baseline scenario. Emission reductions attributable to the project are hence additional to any that would occur in the absence of the project activity.

Given that the project is implemented as designed, the project is likely to achieve the estimated amount of emission reductions. Additionally, the assessment team reviewed the estimation of the projected emission reductions.
